Yeast extracts for use as FERMENTATION NUTRIENTS

Now priced for
commercial production

It will pay you to evaluate
Vico's new line of six low-
cost yeast extracts for use
in industrial fermentation.

Although Vico's yeast autolysates are low-priced, they perform like the high-priced autolysates or extracts used in laboratory investigations. Available in powder or paste—can be stored indefinitely without refrigeration.

Samples, prices, and detailed
information available on request.

industries.

WAYNE MOUSE BREEDER BLOX

A premium, complete ration, proved effective for intensive reproduction, lactation and growth of young.

Contains high balance of calories and protein necessary for top reproduction and growth.

Wayne Mouse Breeder Blox are routinely assayed biologically to guard against the presence of estrogenic activity. The feed is also tested at the time of packing for Salmonella. It contains no added antibiotics or antioxidants. To prevent outside contamination, the product is packed in polyethylene lined bags.

Laboratory Diets Div., Chicago 6, Ill.

One of the world's oldest and largest exclusive
manufacturers of bird and animal diets.

Moss & McQuown's ATLAS OF MEDICAL MYCOLOGY, 2nd ed.

"All the common fungus diseases are described and in each case the geographic distribution, clinical picture, X-ray diagnosis (where applicable), laboratory diagnosis, mycology, histology, treatment and prognosis are briefly discussed. The text is followed by a series of photographs illustrating the clinical picture, X-ray appearance, direct examination of infected material, colonial growth and microscopic features of the fungi. In addition there are chapters dealing with such technical details as the collection of material for examination, preparation of media, staining techniques, etc. For the clinician there is a formulary covering the treatment of all the diseases described."—H. I. Lurie, in *South African J. M. Sc.*

ASTO

Difco reagents for the diagnosis of

Group A Streptococcal Infections

- RHEUMATIC FEVER
- GLOMERULONEPHRITIS

ANTISTREPTOLYSIN O TITERS (ASTO) and their relation to pathological conditions in Group A streptococcal infections have established the importance of this determination as a routine clinical test.

Bacto-Streptolysin O Reagent- a dehydrated, standardized and stable reagent requiring only rehydration with distilled water. Antistreptolysin O titers have been impractical for routine diagnosis because of the difficulties in preparing the reagent. Bacto-Streptolysin O Reagent is a standardized preparation permitting the routine performance of this diagnostic test in all clinical laboratories.

Bacto-ASTO Standard- an antiserum titred in Todd units for use as a control in the determination of antistreptolysin O titers.
